Watching Out For You

LOCKDOWN

Lockdown - For sure the most well-known term in school security. However many questions still exist on what it really means and how it can be triggered. Often times it is enough to design a system that acts as a Lockout only, then as budget allows add layers to achieve a full Lockdown event. In either case the following are the main points to consider when designing your system:

Available Lockdown Triggers:

- **Hardwired Emergency Buttons**
- **Special Lockdown Readers** (any card triggers)
- **Special Lockdown Cards** (work on any readers)
- **Computer Interface**
- **Mobile Device**
- **RAVE app tie in**

Available Lockdown Actions:

- **Exterior Doors Automatically Lock**
- **Classroom Doors Automatically Lock** (wirelessly)
- **Card Access Disabled** (except First Responders)
- **Strobes Light Up Inside and Outside**
- **Card Readers Light up in Red**
- **Email/Text messages are Sent Out Automatically**
- **Visitor Intercoms are Disabled**
- **PA Announcement from Principal** (automated)
- **Public Display Monitors Change**
- **RAVE System Triggered**
